% Shadow/ Semishadow

### POSTHARVEST PROCESS

Process

WASHED

Fermentation

12 hours in cherry and 15 hours in mucilage

Beneficio

Picking fully ripe cherries, like purple grape color. 12 hours of cherry fermentation. Then, depulping without water and selecting the best beans. Then the coffee is left in the fermentation tank for 15 hours without water. Coffee is washed twice and its ready for drying process.

Drying process

Sundried for 20 days

### THE PERFECT COFFEE, A SHORT HISTORY

PHOTO

Don Rosemberg came from an indigenous family. When he started growing coffee, he was alone in charge of the whole process. As his son grew up and became passionate about the world of coffee, he helped him in everything related to the beneficio process. For years they have focused on the production of specialty coffees. His love for the countryside has allowed him to produce very high quality coffees.
